WASH NET FOR THE NORMAL HOUSEHOLD WASHING MACHINE
FOR MEN'S SHIRTS, BLOUSES, PAJAMAS, ETC.

Applicant: Leo Zirk, 2401 Ratekau (Germany)
Inventors: Same as applicant

Examination request filed according to Section 44, Patent Law.

Wash net for the normal household washing machine for men's shirts, blouses, pajamas, etc., which is made of a durable material, which can repeatedly withstand a wash temperature of 95°C in the washing machine. The distance between the meshes in the net is 2 cm and is reinforced on the upper border by a strip with holes. A strip, ca. 30 cm in length, which is meant to close the wash net, is part of the wash net.

Claim

Wash net for the normal household washing machine for men's shirts, blouses, pajamas, etc., which is made of durable material, which repeatedly withstands a wash temperature of 95.0°C in the washing machine. The distance between the meshes in the net is 2 cm and is reinforced, on the upper border, by a strip with holes. An ca. 30-cm-long strip, which is meant to close the wash net, is part of the wash net.

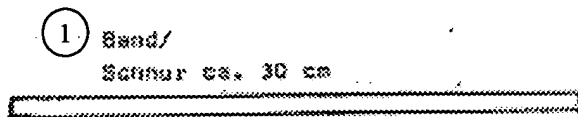

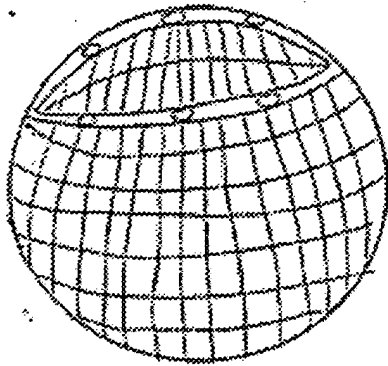

The wash net is conceived so as to be removed orderly from the washing machine, without tearing and pulling. The wash net is made of durable material, which repeatedly withstands a wash temperature of 95.0°C in the washing machine. The corresponding strip is made of the same

material. The distance between the meshes in the net is two centimeters (cm). The net is reinforced with linen on the upper border. There are holes in the strip of the net, through which the corresponding strip is pulled through, so as to close the net.

The wash net is reinforced with a strip on the upper border. There are holes in the strip to close the net. A 30-cm-long strip belongs to the wash net, which is intended to close the wash net.

The wash net is shown in the drawing.
